The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 4-5, 7-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

There is no support in the specification for “charge localization”.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4-5, 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Aloni – US 6,346,442.

See reasons of record in paper # 15, 02/27/03.

Applicant's arguments filed on February 27, 2003 have been fully considered but they are not persuasive.

Aloni clearly states that the middle nitride layer 462 functions as a charge storage or charge trapping region, and the top oxide layer promotes charge retention in the nitride layer 462 during operation as well as improving charge retention in a nitride layer of a memory cell. Although Aloni does not disclose oxygen to be introduced into substantially all of the nitride layer, the oxidation process he discloses to form the top oxide layer must necessarily introduce oxygen because the thicknesses of the bottom oxide layer, deposited nitride layer, and the the top oxide layer are all within the ranges which are in claims 8-11 (as in applicant's specification on pages 7-8). In fact, Aloni also states that the top oxide may be produced by deposition as applicant's specification shows at page 7, lines 23-24.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
